

Ministry of Health

Don't Wait to Vaccinate!

Get your daughter vaccinated today.
Protect her future from cervical cancer.

Did you know...?

HPV vaccine helps protect against cervical cancer.

It is safe and offered free of charge to all 10–14-year-old girls at public health facilities countrywide.

Age Matters!

When we vaccinate our girls by age 14, we help protect them from HPV infections that cause almost all cervical cancers.

HPV vaccine can prevent over 70% of cervical cancers and is best given to girls aged 10 to 14 for maximum effectiveness.

Complete it!

2 doses of HPV vaccine, 6 months apart, are needed to protect your daughter.

Like all other vaccines given in routine immunization, HPV vaccine is approved and distributed by the Ministry of Health in Kenya.

Use the space below to note the dates for your girl's vaccination.

Date of HPV Vaccination: Dose 1 _____

Date of HPV Vaccination: Dose 2 _____
